Maven

Phases

1. Clean: Remove temp directories and files

2. Default: Where the most useful goals live

3. Site: Where documentation is generated

1. Clean

pre-clean

clean

post-clean

- There is target directory that contains all the required class files or any files that are required to run the application they are generated by maven while running the application. To do that:

```
mvn clean
```

Lifecycle Or Default phase:

1. Compile

2. test

3. package

4. verify
